Netherlands

Geocoding

The Netherlands geocoding
pilot

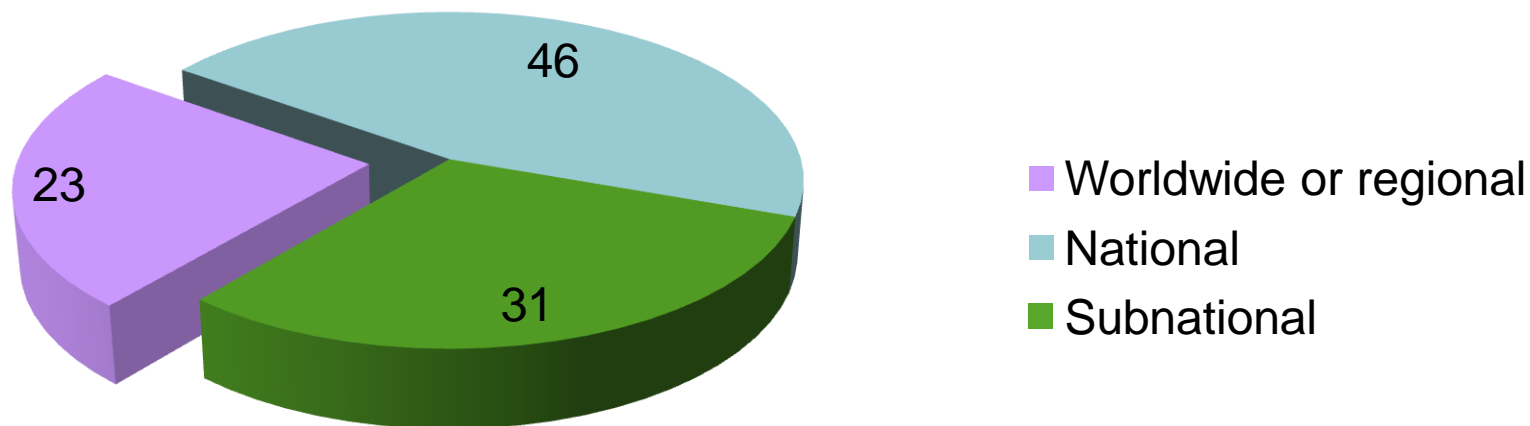

Geocoding pilot

- 2625 activities in the implementation phase
- Geocoding on the basis of the activity appraisal documents
- Representative sample of 114 recent activities
- Using the Uppsala University/ Worldbank methodology

77% can be coded on the national- or subnational level ...

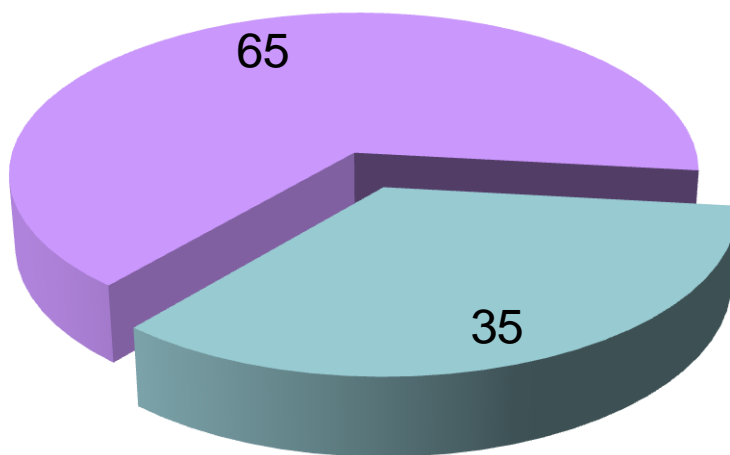

% of activities

... representing only 35% of the budget

% of activities

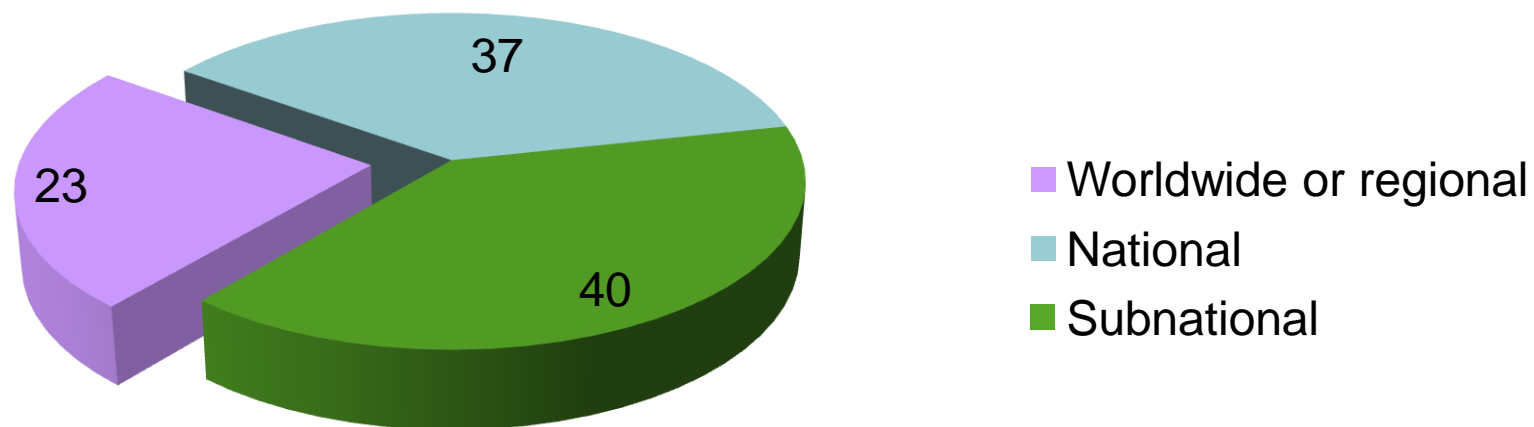

- Worldwide or regional
- (Sub-)national

Using other documentation ...

% of activities

Conclusions & remarks

- Geocoding on the subnational level represents only a modest part of the total budget
- Caused by the policy to use intermediary organisations
- Concentrate efforts on:
 1. Extending the number of IATI participants (NGO's, Multilaterals, etc.)
 2. Making the whole chain of financial flows between recipients and donors more transparent
 3. Geocoding by organisations who implement the activities in the recipient countries
