

Agenda

- Four Pilot Countries and Country Platforms
- Common Mapping Platform
- Geocoding Methodology
- Evaluations for Open Aid Initiatives
- Finland: Open Aid Agenda and Approach

Pilot Countries

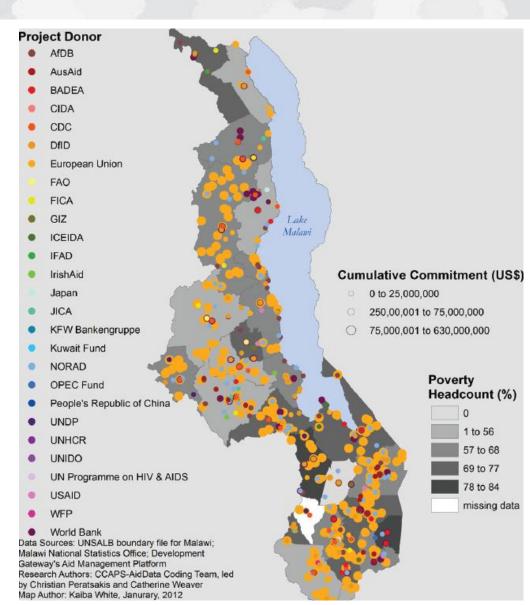

Bolivia • Nepal • Tanzania • Kenya

				ODA as													Founda

Country Platform

- Country Open Aid Map for better coordination and transparency
- Visualize locations of donorfinanced projects
- Combined with socioeconomic indicator data
- Integrated in country platform and aid management system
- Capacity building to ensure sustainability and use of data

Geocoding

Major Proposed Additions to Standard

- Mapping of activities and beneficiaries
- Recording the "scope" of initiatives
- Precision codes: Capturing exact locations (street address), funding to NGO or private sector headquarters, and supranational initiatives

Principles and Future Directions

- Common source for place names desirable (not available yet)
- Common source for administrative boundaries desirable (not available yet)
- At least data of ADM1 should be entered and more granular data is encouraged where possible
- Visualization: Centroids vs. capitals

Open Aid Map

- Global Platform & Local Country Maps
- Decentralized Data Collection and Curation
- Open Data (Attribution License)
- Open Standards (IATI, GAUL, GATM, Geonames, etc.)
- Preference for Open Source Software
